

Command Reference

engine 0.4.0

20 tools · 22 skills · 16 agents

Press `/` in any session – the menu filters as you type.

SESSION built-in

- `/help` What Serge can do, and the keys that do it
- `/model [seat]` Show the current seat, or move to another
- `/mode [name]` Show or set the permission mode
- `/seats` Every seat on the router, and which are reachable
- `/cost` Tokens and requests spent this session
- `/clear` Forget the conversation, keep the transcript
- `/resume` Sessions you can pick up again
- `/exit` Leave

LOADED built-in

- `/skills` Skills the brain has published
- `/agents` Subagents Task can spawn, and their seats
- `/mcp` Connected MCP servers and their tool counts

KEYS

- `/` Open the command menu
- `↑` `↓` Move in the menu · history when it is closed
- `tab` Complete the highlighted command
- `esc` Close the menu
- `shift + tab` Cycle permission mode
- `ctrl + c` Interrupt a turn · twice to exit

THINKING HARDER brain

- `/hive` Convene the council – architect + reviewer on every turn
- `/swarm` Parallel agents with their own fan-out doctrine
- `/deepthink` One hard question, self-consistency across passes
- `/consensus` Independent attempts on diverse seats, then reconciled
- `/research` Multi-angle research passes, synthesised

PROVING THINGS brain

- `/logic` Prove or refute a boolean claim – truth table, not opinion
- `/find` Search many naming conventions at once, ranked
- `/recap` Read what just happened – scrollbar, logs, sessions

MEMORY brain

- `/remember` Save a durable fact to persistent memory
- `/learn` Read a batch of code, persist an architecture digest
- `/plans` Browse, reopen or delete shelved plans

PERMISSION MODES shift+tab

- `default` Asks before editing or running anything
- `acceptEdits` Edits freely; still asks for shell
- `plan` Reads only – no change until the plan is accepted
- `fullAccess` No prompts. Destructive commands still ask.

SUPERCLAUDE brain · /sc:

- `/sc:analyze` Quality, security, performance, architecture
- `/sc:implement` Build a feature with hive-assisted review
- `/sc:troubleshoot` Diagnose code, builds, deploys, behaviour
- `/sc:test` Run tests with coverage and failure diagnosis
- `/sc:git` Commits and workflow
- `/sc:brainstorm` Requirements discovery, Socratic
- `/sc:research` Deep web research, evidence-based

SETUP shell, not slash

- `setup-doctor.sh` Checks your system and verifies every key live
- `rotate-keys.sh` Add a spare account – KEY_2 in keys.env
- `serge --resume` Pick a session back up – printed on every exit
- `serge --fork` Branch a conversation into a new transcript
- `serge -p "..."` One shot, headless, no TUI

WORTH KNOWING

- `/ menu` Lists brain commands too – a built-in wins on a name clash, and the shadowed one says so
- `gates` Architecture, complexity and claims checks run on their own; nothing to invoke
- `seats` Free tier first, with failover. `/seats` shows what is live
